

The Macleod Institute

Environmental management

The product

Quality environmental practices and management strategies are in high demand as businesses and governments search for sustainable results. In today's competitive world, they can settle for no less.

At the Macleod Institute, our associates possess a deep and comprehensive understanding of environmental issues. Our experts create incisive tools and strategies to manage the environment, improve success in regulatory applications, and produce compelling recommendations for managing cradle-to-grave processes.

Our teams have senior level experience in business corporations and government. We understand and develop regulations and policy that govern the environment. And we develop and use a variety of tools such as qualitative and quantitative analysis, benchmarking, case studies and peer reviews to determine workable solutions.

The results

We deliver pragmatic, achievable solutions to environmental challenges. Our results include

- step-by-step guides to environmental practices
- cumulative effects assessment and management
- risk communication plans
- climate change strategies
- new micro-power distributed energy options
- environmental performance measures
- stakeholder understanding and consensus
- concise application of leading-edge scientific and industry practice

The benefits

Our hands-on, results-based approach produces concrete advantages that include

- increased regulatory effectiveness
 - heightened quality assurance
 - enhanced environmental performance
-
